Create a Spartan Flow to run below testCases dynamicly

- POST   /api/spartans

Create a spartan Map

name = "API Flow POST"

gender="Male"

phone=1231231231l

- verify status code 201

- message is "A Spartan is Born!"

- take spartanID from response and save as a global variable

- GET Spartan with spartanID   /api/spartans/{id}

- verify status code 200

- verfiy name is API Flow POST

- PUT Spartan with spartanID   /api/spartans/{id}

    Create a spartan Map

      name = "API PUT Flow"

      gender="Female"

      phone=3213213213

    - verify status code 204

- GET Spartan with spartanID   /api/spartans/{id}

    - verify status code 200

     - verify name is API PUT Flow

- DELETE Spartan with spartanID   /api/spartans/{id}

    - verify status code 204

- GET Spartan with spartanID   /api/spartans/{id}

    - verify status code 404

Challenges

  Create @Test annotated method for each Request

  Put them in order to execute as expected

      - Use your googling skills

      - How to run Junit5 Tests in order ?
